

RA Call with WVDEP Secretary Harold Ward
Wednesday, May 5, 2021

Discussion Points

AIR & RADIATION DIVISION

Ethelene Oxide (For Discussion)

- We have completed risk exposure modeling for 2 Union Carbide facilities—South Charleston and Institute.
- Using air dispersion modeling inputs (local meteorology and facility-based information) from WV Division of Air Quality (WVDAQ), the risk for populated areas remain high.
- A call with WVDAQ was held on April 29 to discuss next steps. We agreed to provide examples of information from other EtO monitoring studies (in other ROs) to WVDAQ so that they can adequately consider whether community monitoring can be conducted. We will be seeking the availability of technical and funding support opportunities from OAQPS to help WVDAQ should they decide to conduct an air monitoring study.
